## EDUCATION

### B.Tech in Computer Science and Engineering

*Expected Jul 2027*

Amrita Vishwa Vidyapeetham, Coimbatore

GPA: 7.56/10

**Coursework:** Data Structures, Algorithms, Operating Systems, Computer Networks, Distributed Systems, Database Systems, Parallel Computing, AI, Machine Learning

## TECHNICAL SKILLS

**Programming:** Python, Java, JavaScript, C, SQL

**Backend:** Node.js, Express.js, Spring Boot, REST APIs, JWT, Google OAuth

**Frontend:** HTML, CSS, React.js, Next.js

**Databases:** MongoDB, PostgreSQL, MySQL

**Cloud & DevOps:** Docker, GCP (Cloud Run, Artifact Registry)

**Tools:** Git, GitHub, Postman, VS Code, Linux

## PROFESSIONAL EXPERIENCE

### AI Intern — VISWAM.AI (Meta, Swecha Telangana, IIIT Hyderabad)

*Summer 2025*

- Improved Telugu ASR accuracy to 85% by designing validation models and fine-tuning transformer architectures on regional dialect datasets.
- Increased data throughput by 40% by building an automated corpus pipeline processing 10,000+ audio-text samples with batch processing.
- Enhanced LLM dataset quality by 25% by curating domain-specific corpora with structured metadata workflows and validation protocols.
- Improved dataset reliability by 35% across 50+ sessions by developing anomaly-detection and statistical QA tools.

## KEY PROJECTS

### Travel Website | *HTML, CSS, JavaScript* | [GitHub](#) | [Live Demo](#)

- Built a multi-page front-end travel platform with structured user flows including landing, destination browsing, booking, login, and contact pages.
- Implemented full-screen background video hero section with clean layout and clear call-to-action buttons.
- Created responsive layouts using CSS with organized asset management and cross-page styling consistency.
- Integrated JavaScript for homepage slider functionality and dynamic UI interactions throughout the site.

### Intelligent Text Analysis Engine | *Python, Data Structures, NLP* | [GitHub](#)

- Developed a real-time conversational analysis engine using Trie, Red-Black Tree, and directed graphs for efficient text processing.
- Implemented auto-completion using prefix tree structure and bigram language model for next-word prediction.
- Built word relationship graph using NetworkX to identify contextual associations and common word sequences.
- Integrated frequency analysis and multi-model approach combining classic data structures with NLP techniques.

### Healthcare IoT Task Scheduling System | *Python, Edge Computing, ML* | [GitHub](#)

- Built priority-based task scheduling system for healthcare IoT implementing PTS mechanism for smart hospital environments.
- Developed real-time health monitoring with intelligent urgency calculation routing tasks between edge devices and cloud.
- Integrated RandomForest ML model trained on UCI Heart Disease dataset with 200+ patient records for priority prediction.
- Implemented edge-cloud decision logic based on medical emergency criteria for heart rate, blood pressure, and glucose monitoring.

## ACHIEVEMENTS & CERTIFICATIONS

- **Oracle Cloud Infrastructure 2025 Certified Generative AI Professional:** Proficient in LLMs, OCI Generative AI Service, RAG, semantic search, vector databases, and LangChain for building and deploying LLM applications.
- Participated in Adobe Hackathon and advanced to Round 2 among competitive field of participants.
- Selected for multiple competitive AI-focused internships (Microsoft/Edunet, AICTE+Shell/Edunet).
- Developed full-stack applications using modern tech stack including React, Node.js, and cloud deployment platforms.
- Contributed to open-source projects and collaborated on team-based development using Git workflows.
- Strengthened problem-solving ability through consistent practice on competitive programming platforms.
